

FILL YOUR POWER NEEDS WITHOUT FILLING YOUR UAV.

L-3 EDD's remarkable new 1KW Microwave Power Module.

This MPM's advanced traveling wave tube (TWT) based design delivers up to 1KW of X-band pulse power for airborne radar applications – in a high-density 11" x 6" x 2" package that weighs less than 9 pounds. It's smaller, lighter, and more efficient, since you can place it closer to the radiating aperture. It leaves more room for sensors. Yet its added power allows for extended transmission range and finer imaging. In essence, it helps a UAV do what it's supposed to do, better. To see how L-3 EDD leads the way in meeting your radar, datalink, and electronic warfare MPM needs, go to www.L-3Com.com/edd
