L-3 WESCAM MX-15 EO/IR IMAGING TURRET FOR THE CHILEAN NAVY

BURLINGTON, CANADA, November 6, 2006 – L-3 Communications WESCAM (L-3 WESCAM), a wholly owned subsidiary of L-3 Communications, announced today that it has been selected by the Chilean Navy to provide an MX-15 electro-optical and infrared (EO/IR) imaging turret for the SH-32 Cougar airframe. System delivery will take place in 2006, followed by an in-country installation by Enaer, a Chilean Air Force Company.

The advanced MX-15 will be a key element to the Chilean Navy's success by providing immediate situational awareness for maritime patrol and search and rescue type missions. Equipped with advanced MX-GEO, auto-tracker, image processing and local area processing,

Chilean operators will receive positive geographical references – further enabling them to automatically locate, point, track and focus with unparalleled accuracy.

The MX-15's outstanding flight-proven performance is what sets L-3 WESCAM apart from the competition. The system offers advanced stabilization, impressive

sensor technology and imaging capability, which provides for long-range subject detection and identification.

“The Chilean Navy is a new MX Turret customer, and this contract marks WESCAM's entrance into the Chilean marketplace,” said Paul Jennison, L-3 WESCAM vice president, government sales and business development. “We are extremely pleased with the Chilean Navy's confidence in the MX Family of turrets and in the selection of the MX-15 for its expanding missions.

Furthermore, this contract clearly strengthens WESCAM's worldwide involvement in leading naval programs.”
